

TREATMENT

MCI PROCEDURE

FOG #4

- Don the appropriate vest and use the radio designation "Treatment."
- Direct personnel to either begin treatment on victims where they lie OR establish a centralized treatment area. Ensure security with the assistance of law enforcement personnel.
- Coordinate the movement of victims into the treatment area with the Litter Bearers.
- Consider obtaining a Documentation Aide to assist with paperwork.
- Request additional medical supplies as necessary from the MEDICAL SUPPLY Coordinator. (Broward County has 4 MCI/WMD Supply Trailers.)
- Ensure personnel perform a secondary triage and tag victims with triage tags. Personnel will then remove the colored ribbons.
- If the incident size warrants it, designate a Treatment Team Manager for each color category (RED, YELLOW, GREEN).
- Advise TRANSPORT of victim(s) requiring immediate transportation.
- Account for all victims triaged and treated on the Treatment Log.
- Advise COMMAND/MEDICAL as to any changes in the victim count.
- If victims are contaminated, use the Disaster Management System (DMS) All-Risk Triage tag to identify contaminated victims and identify any antidotes administered. Have victims remove their clothing and place it in bags. Use the ID strip from the DMS All-Risk Triage tags to label the bags and request law enforcement to secure the items. After decontamination is completed, remove the pink contamination strip from the DMS All-Risk Triage tag (gross decontamination as a minimum).
- If the incident is due to a known or suspected WMD/terrorist event, refer to WMD FOG #8. Work with the Medical Intelligence Officer to assist with decontamination, antidotes, and treatment of victims.
